Display LG AG promote latest Display innovation trends during embedded world 2017

Display LG AG joined already for the fourth time this exhibition and we could again promote a wide range of new display technologies and interesting new developments of upcoming products. During this show held during March 14th to 16th, more than 1.000 Exhibitors showed technical solutions to over 30.000 visitors. At the same time, a Display Conference hosted 1.700 participants from 42 countries all over the world.

Our highlights including round TFT and OLEDs, small TFT with high brightness for outdoor applications and of course TFT solutions with PCAP. Continuously many customers showed interest in custom LCD solutions in various technologies.

We like to say thanks to all of our visitors which joined us on our booth and look forward to see you again next year. The exhibition timing is already set for Feb.27th until March 1st 2018, save the date!

Sincerely, Display LC AG Sales Team
